

# SOFTWARE RELEASE NOTES

Product: 5000 Series Weigh Scale Indicators  
Version: 3.2.1

## Version 3.2.1.10279 23 August 2017

### NEW FEATURES

- Uploading sessions to [Tru-Test MiHub™ Livestock](#) is now available worldwide.

### FIXES

- Setting the Bluetooth to On/Off will now persist through a restart of the system.
- Fix issue with drafting against a Historic field that referenced to a List of Values.
- Fix issue with MiHub default farm not being updated when switching user accounts.

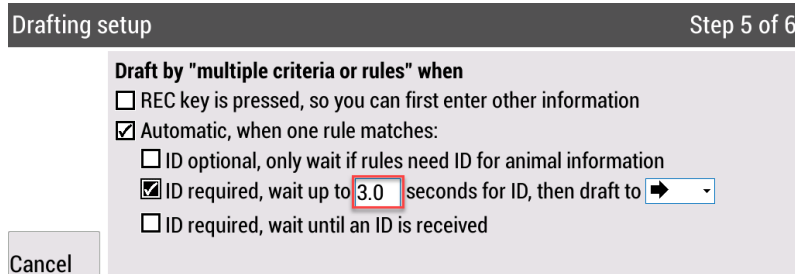

## Version 3.1.0.10270 13 June 2017

### NEW FEATURES

- Uploading sessions to [Tru-Test MiHub™ Livestock](#) is now available for Australia.
- Now weight gains will be re-calculated if an animal weight is entered manually in the Session Animals screen.

### FIXES

- Offspring pairing count is now calculated correctly when an offspring has been deleted.
- Fix for issue where the auto-drafter would not release an animal if this setting:

was set to <3 seconds (the time it could take for the weight to stabilise).

- Fix for issue with drafting statistics displaying incorrectly when drafting by a custom session data field using an uploaded session file.

## Version 3.0.0.10253 19 May 2017

- Support new LCD display.

## Version 2.9.2.10211 21 April 2017

### NEW FEATURES

- You can now upload sessions to [Tru-Test MiHub™ Livestock](#). MiHub is a new, cloud-based livestock management system which allows you to monitor animal weight gains and track performance against target weights.

On the 5000 indicator, you can upload files directly to MiHub from the Wi-Fi Data Link screen:

Currently, MiHub is only available in New Zealand, but it will soon be available in other countries.

## FIXES

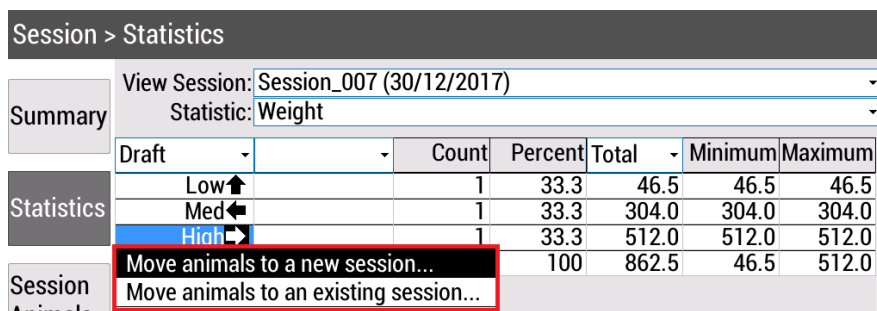

- Fix calculating animal age in months.

### Banana weighing improvements including:

- A packer can now apply a favourite when starting a new session.
- A packer can now modify a field by selecting from a 'list of values' (drop-down) field in the Session Data screen.

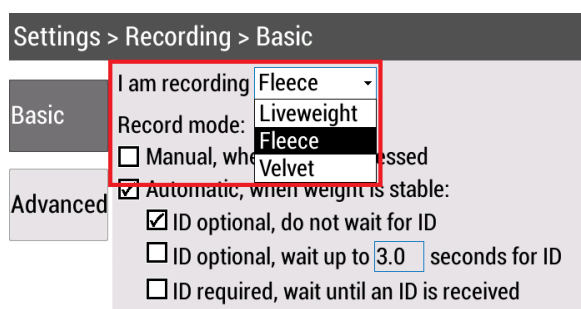

**NEW FEATURES**

- In the Session > Statistics screen, you can now move a whole draft range to a new session or an existing session.

- Weight type can now be defined specifically for fleece and velvet weighing (XR5000 Only).

To choose a weight type (Liveweight, Fleece or Velvet), go to the Settings > Recording > Basic screen

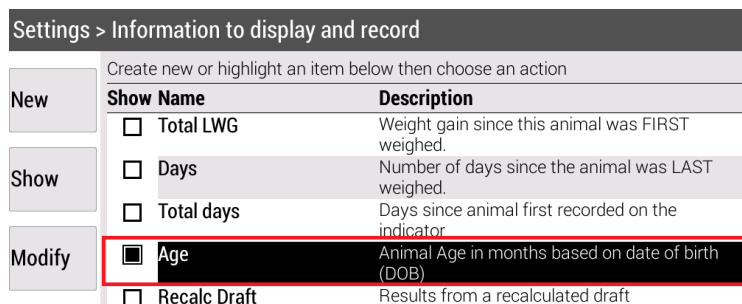

**FIXES**

- In the drafting rules section of the Settings > Drafting screen, the definitions have changed from being "Less than" and "Greater than" to being boundary inclusive "Less than or equal to" and "Greater than or equal to".
- In statistics calculations, only non-blank values will be included in the Average.
- Fix for an issue where some indicators were not showing a withholding alert on the Weigh screen.

**Version 2.8.0.9972 29<sup>th</sup> November 2016**

**FEATURES/CHANGES:**

- Animal age in months can now be displayed. Animal age is automatically calculated, based on the date of birth entered.

- It is now possible to automatically add a suffix to the end of an ID field (similar to the existing Prefix feature).
- "Set tare" option is now available in the Settings > Weighing screen.

- A 'Base value' (an initial value) can be set for an Auto Increment field.
- Total has been added to the Session Statistics table.
- Target liveweight settings can now be configured:

Settings > Modify Off TWT

Reset

**Target liveweight (TWT)**

The target liveweight is calculated based on the mature liveweight for the animal's breed composition.  
To use this feature, each animal requires a breed and date of birth.

Note: Calculation is based on % of mature live weight.

Breed	Mature live weight (kg)	Months	Percentage
(Default)	450	3	20%
Angus	300	6	30%
Brahman	500	9	40%
Crossbreed	450	15	60%
Fresian	600	22	90%
Hereford	500	72	100%
Jersey	600		
Nelore	480		

- To assist with searching for animals, EID can now be entered in the "Search" field in the Animal screen and in the Session Animals screen.
- Sound volume now has low and medium options.
- Animals can now be moved from one session to another.
- Screenshots of the device can now be saved.
- Special characters (á, é, ç, ã, etc) can now be included in some text entry fields
- Weights and animal/session data can now be printed out with values separated by commas (CSV - comma separated values).

#### Banana weighing improvements including:

- Improved in-motion weighing speed
- Support for PB9 statistics

#### FIXES:

- Numerous drafting issues
- Weight gain fix for if the first animal record doesn't have a weight

### Version 2.6.2.9486 6<sup>th</sup> May 2016

---

#### This update contains bug fixes and improvements including:

- Fixes an issue where indicator could record the weight when Prattley auto-drafter entry gate is still open.
- Fixes 2-way drafting.

### Version 2.6.1.9472 15<sup>th</sup> April 2016

---

#### This update contains bug fixes and improvements including:

- Fixes an issue that could cause the indicator would not start-up.

## Version 2.6.0.9433 6<sup>th</sup> April 2016

---

### FEATURES/CHANGES:

- New SuperDamp 4 weighing algorithm to provide faster weighing for cattle and sheep.
- Added rules based drafting, to provide simpler multiple criteria drafting. See drafting setup guide for more information.
- Added feature to re-calculate draft (sort). See drafting setup guide for more information.
- Added feature to allow user to override draft arrow on weigh screen.

### FIXES:

- Improve stability when connecting with Bluetooth devices
- Fix a bug that causes invalid timestamp for weight records.
- Various minor fixes

## Version 2.1.2.8812 13<sup>rd</sup> November 2015

---

### This update contains bug fixes and improvements including:

- Fixes an issue that caused abort after loading favourites.
- Improves the stability of viewing previous session information.
- Support {RP} command

## Version 2.1.0.8695 20<sup>th</sup> October 2015

---

### FEATURES/CHANGES:

- **Offspring pairing (XR5000 Only)** - The offspring pairing feature allows a breeder to link offspring to a dam so they can look up an animal's lineage. This feature is intended to be used in a workflow where the Dam ID is entered first and then its offspring's IDs are entered. You can achieve the following with this feature:
  - Link a Dam with its current offspring and record into the offspring lifetime information
  - Record other information for the offspring and/or Dam such as DOB, Breed
  - Optionally record weights, either by connecting to a load cell/ load bar or by manually entering
  - Look up the statistics of the lambing (or calving) percentages to monitor reproductive performance.

For more information, refer to the *Offspring Pairing Setup Guide*.

Clear Dam	VID: OFF2	Current Dam VID: DAM1 EID: Number of offspring: 1  Press <b>Clear Dam</b> when all offspring for current dam are recorded.				
	EID: Scan to add					
Animal	Weight: 5 kg					
Session						
Change Tag	D/O	Dam VID	Dam EID	VID	Weight (kg)	ADG (kg/day)
	Off	DAM1		OFF2	5.0	0.5
	Off	DAM1		OFF1	6.0	0.5
Options	Dam			DAM1	45.0	0

- **Option to display in a larger font** - Adds the ability to display information on the weigh screen in Normal/Large/Extra Large font.
  - Factory default favourites are optimised to display in largest font size.
  - User can change the font size. First go to **Settings > Information to display and record**, highlight an item, press **Modify** softkey, then select **Display size**.

Weight stable - Press record	
Reweigh	<b>516</b> kg
Animal	
Session	
Change Tag	ADG: <b>0.02</b> kg/day VID: <b>TTDEMO216</b>
Options	Count: <b>1</b> EID: 982 000359951589

Weight stable - Press record	
Reweigh	<b>516</b> kg
Animal	
Session	
Change Tag	Sex: <b>Male</b> VID: <b>TTDEMO215</b>
Options	Breed: <b>Angus</b> EID: 982 000359951394
	DOB: <b>12/06/2012</b>
	Count: <b>1</b>

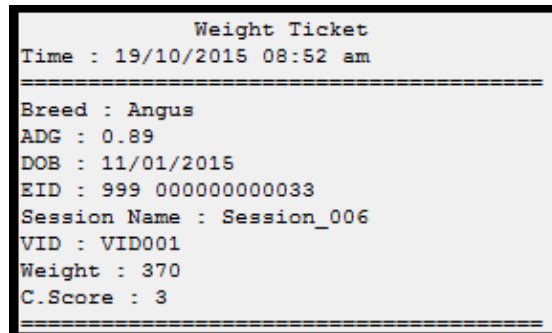

Settings > Modify ADG	
"ADG" is session information	
Field name:	ADG
Description:	Average daily weight gain since this animal was LAST weighed.
Field type:	Numeric only
Display size:	<b>Extra Large</b>

- **Bluetooth master mode**; the indicator can initiate a connection to another Bluetooth device to simplify the connection process.
    - Provides a simple interface to connect to other devices, such as EID readers or printers.
    - Select a connected device in the list to configure the output options to either send ID barcode to a printer, weight on record, EID/Weight on record, or ticket on record (as below) from weigh scale to other device.
    - Select a connected device in the list to configure input options to map information to a field. Example applications include scanning a visual tag or other data using a Bluetooth barcode reader.
- Note:* EID tags are automatically routed to the EID field and this setting is ignored.

*Notes:*

- For Prattley Autodrafters, there is no change to the current pairing process, as the drafter supports master mode only.
  - Some devices may need to be configured to accept “0000” as the Bluetooth PIN.
- **Add "Ticket" feature to serial port output.** The information shown on the weigh screen is sent out the selected serial port in the format shown below:

- Support ID auto increment while no loadbar is connected.
- Support saving historic fields while no loadbar is connected.

**FIXES:**

- Improved the robustness of the firmware update.
- Fixed abort when reaching the maximum number of custom fields allowed.
- Various minor fixes.

## Version 2.0.3.8088 16<sup>th</sup> July 2015

---

### FIXES:

- Fixed translation for new added fields (WOD, DTT)
- Fixed date format issues when downloading sessions using Smartphone Apps.

## Version 2.0.1.8055 6<sup>th</sup> July 2015

---

### FEATURES/CHANGES:

- Add a new interfacing mode to support legacy third party software.
- Support putting information on the indicator using REST API.
- Prediction feature - based on average daily weight gain, the indicator can calculate the predicted weight of an animal after a certain time (weight on day or WOD), or conversely, the time to reach a certain weight (days to target or DTT).
- Ability to view and record previous session information.
- Support serial weight output when weight is recorded.
- Add alert beep (short beep twice) when an animal is drafted to pen direction "Stop".
- Support printing of tag text and barcode label of any ID combination.
- Default USB mode to "Ethernet", so requires Data Link™ v5.0 or later.

### FIXES:

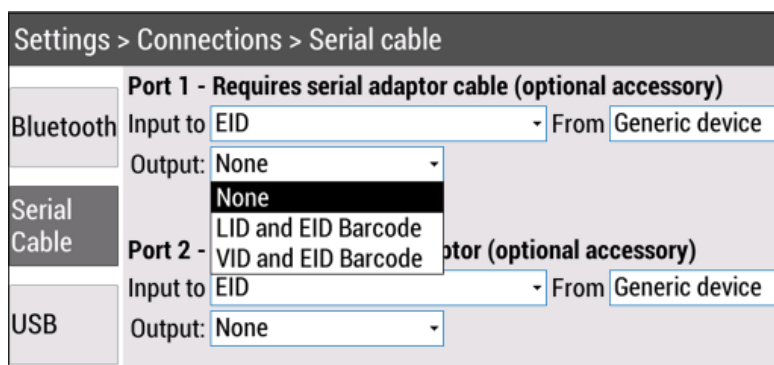

- Improved the robustness of the firmware update.
- Fixed session animals screen layout.
- Various minor fixes

## Version 1.3.1.7493 5<sup>th</sup> March 2015

---

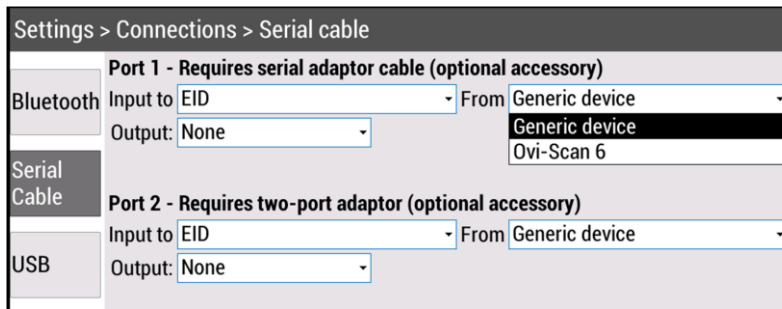

### FEATURES/CHANGES:

- Deleting animals off scale – Added option when deleting a session to delete animals off the weigh scale. For example if you sold a mob of cattle delete them off the scale (delete all data including lifetime data) as they are no longer on your property.
- Serial port output - Support printing of barcode label of visual tag and EID tag for Zebra printers. This is often used for blood or fleece samples for laboratory testing. Options to print different combinations of visual and EID tags.

- Serial port input – Add option to reformat information received from Ovi Scan 6 pregnancy scanner to removed redundant information.

- Added Session Name column to the Animal History table to make it easier to find previous information.
- Support pressing record before weight stable for auto drafting manual mode.
- Re-apply the draft settings when session reopened

#### FIXES:

- Fixed Prattley auto drafter issue when "No EID timeout" was set to 3 seconds.
- Default XHD resolution to 2kg if interchanged from MP600.

### Version 1.2.5.7126 15<sup>th</sup> December 2014

---

#### FEATURES/CHANGES

- Improved the sort order for ID fields. Previously IDs would not be ordered in numeric sequence if they had a prefix. Now if the VID's had a prefix of "VX-" the resulting sort order would be: "VX-1, VX-2, VX-10, VX-12".
- Added support for new XHD2 and extreme load cells.
- Allow adding a new ID after entering Session data.

#### FIXES

- Fix several column layout issues (i.e. missing columns).

### Version 1.2.2.7046 14<sup>th</sup> November 2014

---

#### FEATURES:

- New treatments feature – See attached guide document
  - New settings page in setting menu
  - Wizard to setup treatment with name/dosage/withholding periods
  - Option to calculate dosage
  - Alerts on withholding period and new calculated field for withholding date
  - Use can collect the amount of product and batch number (for compliance) on weigh screen
- Move columns in table (header row menu)
- Improved column width sizing and format
- Re-open a session
- Drafting
  - Ability to have a stop direction when drafting by weight. You can use this to stop the drafter when two lambs enter. For example: less than 38kg ^, 38-40kg <, 40-50kg >, 42kg and above STOP
  - Multi-criteria drafting now has options to handle: (Blank), (Non-bank)
  - Single criteria numeric fields change from equal rules to range rules.

- French & German language support
- Icons on weigh screen when in repeat or auto increments modes to make it clearer to the user.
- Display flat battery image on start-up if battery voltage is too low, on screen for 10 seconds.
- Feedback to user if animal has been recorded already in the session.

**FIXES:**

- Improvements to Bluetooth stability
- Various minor fixes

**Version 1.0.1.5359 6<sup>th</sup> June 2014**

---

- Initial release.
